Let us think about it ...

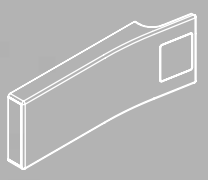

there certainly isn't any other fitting element in living rooms that is used more frequently than the door. It is therefore an essential component of interior design. As far as we are concerned, a door should do much more than just fulfil its purpose. It is, after all, the connecting element for living areas.

Smart Entrance – Touch to open provides innovations that change the way you enter a room. **Visually, physically and acoustically.**

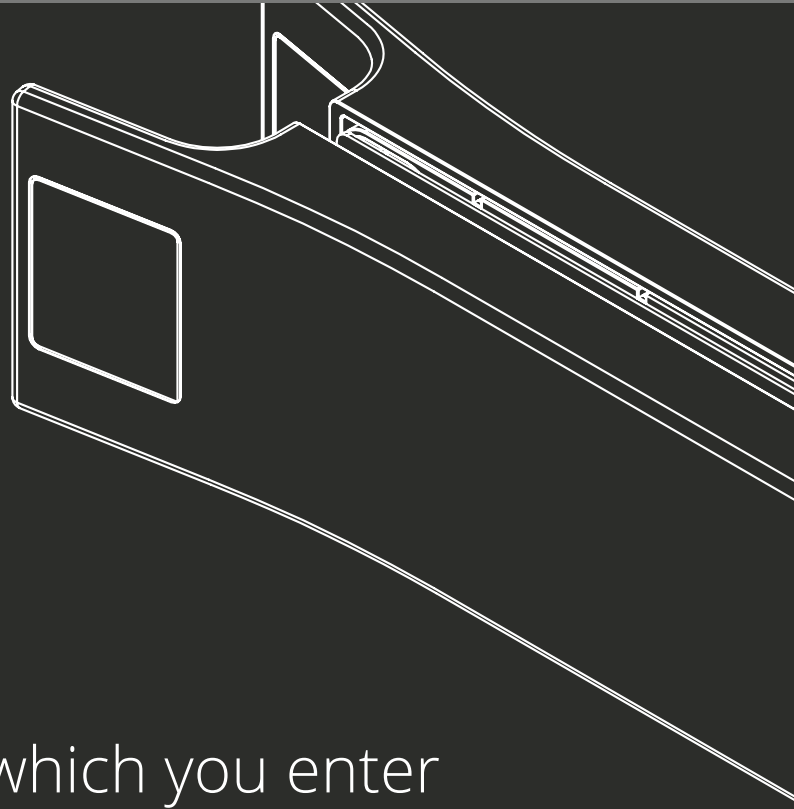

Smart Entrance – Touch to open makes it possible to open and lock a glass door by lightly touching the contact surface. This innovation does more than provide increased comfort and a different feel, it also offers completely new options for room design.

The user is provided with a special experience when making contact with the door: there is no longer the need for the rotation movement of the door handle.

Aleo 

The manner in which you enter a room ...

Optics

It renders the classic rotation mechanism of door handle unnecessary and allows for completely new ideas in living space design. The particularly high-quality look fits perfectly in modern and architecturally sophisticated living concepts.

Acoustics

Smart Entrance – Touch to open contributes to users' well-being as it allows doors to be closed very easily and quietly.

Feel

Being able to lightly touch the contact surface in order to open a door makes any other kind of movement unnecessary. Touch to open makes opens up living spaces intuitively and fluidly.

Handle design for glass doors

Interior design is a decisive factor nowadays for stylish architectural concepts. The innovative feel provides a particular operating comfort because the special technology replaces the classic door handles and allows glass doors to shine as high-quality design objects.
